#### **ABOUT THIS MANUAL**

#### **Purpose**

This manual describes the assembly, installation, operation and troubleshooting of this unit. Please read this manual carefully before installations and operations. Keep this manual for future reference.

# Scope

This manual provides safety and installation guidelines as well as information on tools and wiring.

# The following cases are not within the scope of warranty

- 1. Out of warranty.
- 2. Series number was changed or lost.
- 3. Battery capacity was declined or external damaged.
- 4. Inverter was damaged caused of transport shift, remissness, ect external factor
- 5. Inverter was damaged caused of irresistible natural disasters.
- Not in accordance with the electrical power supply conditions or operate environment caused damage.

#### SAFETY INSTRUCTIONS

WARNING: This chapter contains important safety and operating instructions. Read and keep this manual for future reference.

- Before using the unit, read all instructions and cautionary markings on the unit the batteries and all appropriate sections of this manual.
- CAUTION --To reduce risk of injury, charge only deep-cycle lead acid type rechargeable batteries. Other types of batteries may burst, causing personal injury and damage.
- 3. Do not disassemble the unit. Take it to a qualified service center when service or repair is required. Incorrect re-assembly may result in a risk of electric shock or fire.
- To reduce risk of electric shock, disconnect all wirings before attempting any maintenance or cleaning. Turning
  off the unit will not reduce this risk.
- 5. CAUTION -- Only qualified personnel can install this device with battery.
- 6. **NEVER** charge a frozen battery.
- For optimum operation of this inverter/charger, please follow required spec to select appropriate cable size. It's very important to correctly operate this inverter/charger.
- 8. Be very cautious when working with metal tools on or around batteries. A potential risk exists to drop a tool to spark or short circuit batteries or other electrical parts and could cause an explosion.
- Please strictly follow installation procedure when you want to disconnect AC or DC terminals. Please refer to INSTALLATION section of this manual for the details.
- 10. Fuses (1 piece of 150A, 63VDC for 5KW) are provided as over-current protection for the battery supply.
- 11. GROUNDING INSTRUCTIONS- This inverter/charger should be connected to a permanent grounded wiring system. Be sure to comply with local requirements and regulation to install this inverter.
- 12. NEVER cause AC output and DC input short circuited. Do NOT connect to the mains when DC input short circuits.
- 13. Warning!! Only qualified service persons are able to service this device. If errors still persist after following troubleshooting table, please send this inverter/charger back to local dealer or service center for maintenance.

#### INTRODUCTION

This is a multi-function inverter/charger, combining functions of inverter, solar charger and battery charger to offer uninterruptible power support with portable size. Its comprehensive LCD display offers user-configurable and easy-accessible button operation such as battery charging current, AC/solar charger priority, and acceptable input voltage based on different applications.

#### **Features**

Pure sine wave inverter

Configurable input voltage range for home appliances and personal computers via LCD setting

Configurable battery charging current based on applications via LCD setting

Configurable AC/Solar Charger priority via LCD setting

Compatible to mains voltage or generator power

Auto restart while AC is recovering

Overload/ Over temperature/ short circuit protection

Smart battery charger design for optimized battery performance

Cold start function

# **Basic System Architecture**

The following illustration shows basic application for this inverter/charger. It also includes following devices to have a complete running system:

Generator or Utility.

PV modules (option)

Consult with your system integrator for other possible system architectures depending on your requirements.

This inverter can power all kinds of appliances in home or office environment, including motor-type appliances such as tube light, fan, refrigerator and air conditioner.

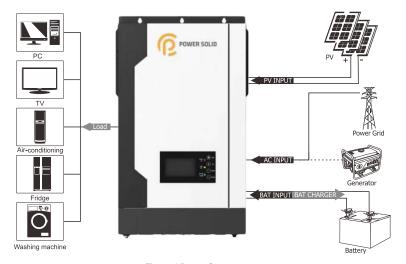

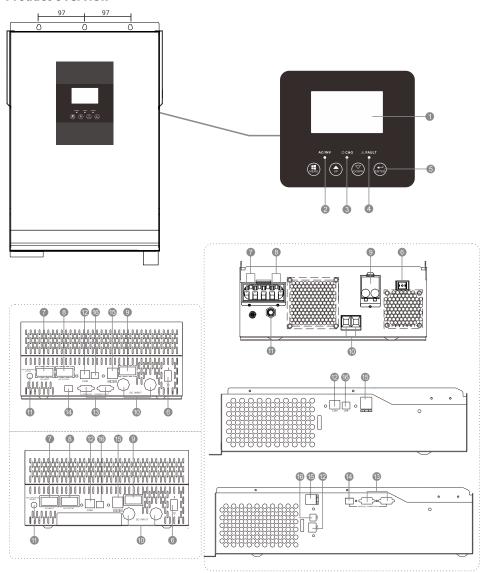

Figure 1 Power System

# **Product Overview**

- 1. LCD display
- 5. Function buttons
- 9. PV input
- 14. Parallel switch
- 2. Status indicator
- 6. Power on/off switch
- 10. Battery input

- 13. Parallel communication port (only for parallel model) 15. Dry contact
  - 16. US
- 3. Charging indicator
- 7. AC input
- 11. Circuit breaker
- 4. Fault indicator
- 8. AC output
- 12. RS485 communication port

#### INSTALLATION

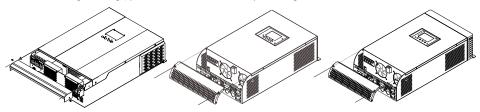

#### **Unpacking and Inspection**

Before installation, please inspect the unit. Be sure that nothing inside the package is damaged. You should have received the following items inside of package:

The unit x 1 User manual x 1 USB cable x 1

# **Preparation**

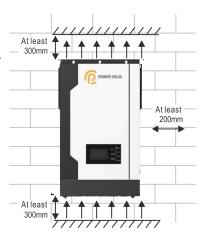

Before connecting all wirings, please take off bottom cover by removing two screws as shown below.

# **Mounting the Unit**

Consider the following points before selecting where to install:

- Do not mount the inverter on flammable construction materials.
- Mount on a solid surface.
- Install this inverter at eye level in order to allow the LCD display to be read at all times.
- For proper air circulation to dissipate heat, allow a clearance of approx. 200 mm to the side and approx. 300 mm above and below the unit.
- The ambient temperature should be between 0°c and 55°c to ensure optimal operation.
- The recommended installation position is to be adhered to the wall vertically.
- Be sure to keep other objects and surfaces as shown in the diagram to guarantee sufficient heat dissipation and to have enough space for removing wires

SUITABLE FOR MOUNTING ON CONCRETE OROTHER NON-COMBUSTIBLE SURFACE ONLY.

## **Battery Connection**

**CAUTION:** For safety operation and regulation compliance, it's requested to install a separate DC over-current protector or disconnect device between battery and inverter. It may not be requested to have a disconnect device in some applications, however, it's still requested to have over-current protection installed. Please refer to typical amperage in below table as required fuse or breaker size.

**WARNING!** All wiring must be performed by a qualified personnel.

**WARNING!** It's very important for system safety and efficient operation to use appropriate cable for battery connection. To reduce risk of injury, please use the proper recommended cable and terminal size as below.

### Recommended battery cable and terminal size:

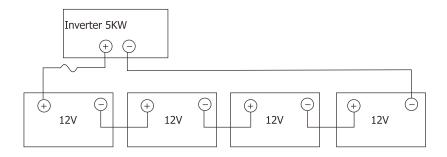

Model	Typical Amperage	<b>Battery Capacity</b>	Torque Value
5KW DC48V	105A	200AH	1*4AWG
SKW DC46V	105A	ZUUAH	2*6AWG

### Ring terminal:

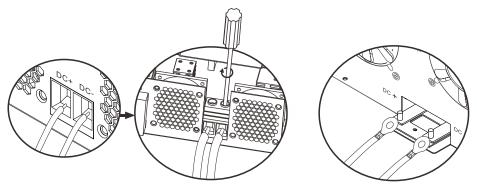

Please follow below steps to implement battery connection:

- 1. Assemble battery ring terminal based on recommended battery cable and terminal size.
- Connect all battery packs as units requires. It's suggested to connect at least 200Ah capacity battery for 5KW model.

3. Insert the ring terminal of battery cable flatly into battery connector of inverter and make sure the bolts are tightened with torque of 2-3 Nm. Make sure polarity at both the battery and the inverter/charge is correctly connected and ring terminals are tightly screwed to the battery terminals.

# **WARNING: Shock Hazard**

Installation must be performed with care due to high battery voltage in series.

**CAUTION!!** Do not place anything between the flat part of the inverter terminal and the ring terminal. Otherwise, overheating may occur.

**CAUTION!!** Do not apply anti-oxidant substance on the terminals before terminals are connected tightly. **CAUTION!!**Before making the final DC connection or closing DC breaker/disconnector, be sure positive (+) must be connected to positive (+) and negative (-) must be connected to negative (-).

#### **AC Input/Output Connection**

**CAUTION!!** Before connecting to AC input power source, please install a separate AC breaker between inverter and AC input power source. This will ensure the inverter can be securely disconnected during maintenance and fully protected from over current of AC input. The recommended spec of AC breaker is 50A for 5KW.

**CAUTION!!** There are two terminal blocks with "IN" and "OUT" markings. Please do NOT-misconnect input and output connectors.

**WARNING!** All wiring must be performed by a qualified personnel.

**WARNING!** It's very important for system safety and efficient operation to use appropriate cable for AC input connection. To reduce risk of injury, please use the proper recommended cable size as below.

# Suggested cable requirement for AC wires

Model	Gauge	Torque Value
5KW DC48V	8 AWG	1.4~ 1.6Nm

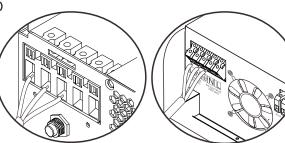

Please follow below steps to implement AC input/output connection:

- 1. Before making AC input/output connection, be sure to open DC protector or disconnector first.
- 2. Remove insulation sleeve 10mm for six conductors. And shorten phase L and neutral conductor N 3mm.
- Insert AC input wires according to polarities indicated on terminal block and tighten the terminal screws. Be sure
  to connect PE protective conductor (⊕) first.

 $L \rightarrow LINE$  (brown or black)

N → Neutral (blue)

# WARNING:

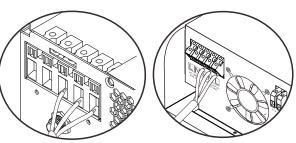

Be sure to that AC power source is disconnected before attempting to hardwire it to the unit.

4. Then, insert AC output wires according to polarities indicated on terminal block and tighten terminal screws. Be sure to connect PE protective conductor (
) first.

L 
ightarrow LINE (brown or black)

N → Neutral (blue)

5. Make sure the wires are securely connected.

#### **CAUTION:** Important

Be sure to connect AC wires with correct polarity. If L and N wires are connected reversely, it may cause utility short-circuited when these inverters are worked in parallel operation.

**CAUTION:** Appliances such as air conditioner are required at least 2~3 minutes to restart because it's required to have enough time to balance refrigerant gas inside of circuits. If a power shortage occurs and recovers in a short time, it will cause damage to your connected appliances. To prevent this kind of damage, please check manufacturer of air conditioner if it's equipped with time-delay function before installation. Otherwise, this inverter/charger will trig overload fault and cut off output to protect your appliance but sometimes it still causes internal damage to the air conditioner.

#### PV Connection

**CAUTION:** Before connecting to PV modules, please install separately a DC circuit breaker between inverter and PV modules.

**WARNING!** All wiring must be performed by a qualified personnel.

**WARNING!** It's very important for system safety and efficient operation to use appropriate cable for PV module connection. To reduce risk of injury, please use the proper recommended cable size as below.

Model	Typical Amperage	Cable Size	Torque
5KW DC48V	80A	6AWG	2.0~2.4 Nm

#### **PV Module Selection:**

When selecting proper PV modules, please be sure to consider below parameters:

- 1. Open circuit Voltage (Voc) of PV modules not exceeds max. PV array open circuit voltage of inverter.
- 2. Open circuit Voltage (Voc) of PV modules should be higher than min. battery voltage.
- 3. Max. Power Voltage (Vmpp) of PV modules should be close to best Vmp of inverter or within Vmp range to get best performance. If one PV module can not meet this requirement, it's necessary to have several PV modules in series connection. Refer to below table.

Note: \* Vmp: panel max power point voltage.

The PV charging efficiency is maximized while PV system voltage is close to Best Vmp.

Maximum PV module numbers in Series: Vmpp of PV module\*X pcs = Best Vmp of Inverter or Vmp range

PV module numbers in Parallel: Max. charging current of inverter/Impp

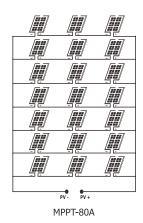

Total PV module numbers=maximum PV module numbers in series\*PV module numbers in parallel

Solar Charging Mode			
INVERTER MODEL 5KW DC48V

# Solar panel installation schematic

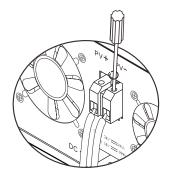

Please follow below steps to implement PV module connection:

- 1. Remove insulation sleeve 10 mm for positive and negative conductors
- 2. Check correct polarity of connection cable from PV modules and PV input connectors. Then, connect positive pole (+) of connection cable to positive pole (+) of PV input connector. Connect negative pole (-) of connection cable to negative pole (-) of PV input connector.

3. Make sure the wires are securely connected.

# **Final Assembly**

After connecting all wirings, please put bottom cover back by screwing two screws as shown below.

# **Communication Connection**

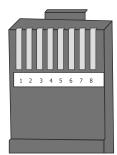

Please use supplied communication cable to connect to inverter and PC. Insert bundled CD into a computer and follow on-screen instruction to install the monitoring software. For the detailed software operation.

WARNING: It's forbidden to use network cable as the communication cable to directly communicate with the PC port. Otherwise, the internal components of the controller will be damaged.

WARNING: RJ45 interface is only suitable for the use of the company's supporting products or professional operation.

# Below chart show RJ45 Pins definition

#### Dry Contact Signal

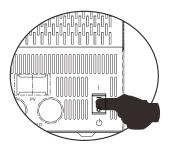

There is one dry contact (3A/250VAC) available on the rear panel. It could be used to deliver signal to external device when battery voltage reaches warning level.

Unit status		(	Dry contact po	140 0 140	
	1 looks to 1 cfc - 1 d			NC&C	NO&C

#### **OPERATION**

# Power ON/OFF

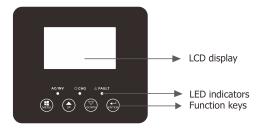

Once the unit has been properly installed and the batteries are connected well, simply press On/Off switch (located on the button of the case) to turn on the unit.

# **Operation and Display Panel**

The operation and display panel, shown in below chart, is on the front panel of the inverter. It includes three indicators, four function keys and a LCD display, indicating the operating status and input/output power information.

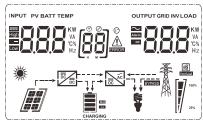

#### **LED Indicator**

LED Indicator			Messages
AC/INV Green		Solid On	Output is powered by grid in Line mode.
		Flashing	Output is powered by battery or PV in battery mode.
CHG Yellow Flashing		Flashing	Battery is charging or discharging.
<b>▲ FAULT</b> Red		Solid On	Fault occurs in the inverter.
		Flashing	Warning condition occurs in the inverter.

# **Operating State Description**

Operating State Description		
Operating State	Description	LCD display
Match load state Note: DC power produced from your solar array is converted by the inverter into AC power, which is then sent to your main electrical panel to be used by your household appliances. Any excess power generated is not sold back to the grid, but stored in battery.	PV energy is charger into the battery or convertered by the inverter to the AC load	PV energy power is larger than inverter power  PV energy power is smaller than inverter power  PV is off
Charge state	PV energy and grid can charge batteries.	
Bypass state	Error are caused by inside circuit error or external reasons such as over temperature, output short circuited and so on.	
Off-Grid state	The inverter will provide output power from battery and PV power.	Inverter power loads from PV energy.  Inverter power loads from battery and PV energy.  Inverter power loads from battery only.
Stop mode	The inverter stop working if you turn off the inverter by the soft key or error has occurred in the condition of no grid.	

# Display Setting

The LCD display information will be switched in turns by pressing "UP" or "DOWN" key. The selectable information is switched as below order: battery voltage, battery current, inverter voltage, inverter current, grid voltage, grid current, load in Watt, load in VA, grid frequency, inverter frequency, PV voltage, PV charging power, PV charging output voltage, PV charging current.

Selectable information	LCD display	
Battery voltage/DC discharging current	SEATT V	480 ^
Inverter output voltage/Inverter output current	228	I III A
Grid voltage/Grid current	228	GRID A
Load in Watt	KW	LOAD VA
Grid frequency/Inverter frequency	INPUT Hz	SINV Hz
PV voltage and power	PV	C.L.L
PV charger output voltage and PV charging current	5 10	OUTPUT A

# **SPECIFICATIONS**

Table 1 Line Mode Specifications

INVERTER MODEL	5KW	
Input Voltage Waveform	Sinusoidal (utility or generator)	
Nominal Input Voltage	230Vac	
Low Loss Voltage	90Vac±7V(APL,GEN);170Vac±7V(UPS); 186Vac±7V(VDE)	
Low Loss Return Voltage	100Vac±7V(APL,GEN);180Vac±7V(UPS); 196Vac±7V(VDE)	
High Loss Voltage	280Vac±7V(UPS,APL,GEN); 253Vac±7V(VDE)	
High Loss Return Voltage	270Vac±7V(UPS,APL,GEN); 250Vac±7V(VDE)	
Max AC Input Voltage	300Vac	
Nominal Input Frequency	50HZ/60HZ(Auto detection)	
Low Loss Frequency	40HZ±1HZ(UPS,APL,GEN); 47.5HZ±0.05HZ(VDE)	
Low Loss Return Frequency	42HZ±1HZ(UPS,APL,GEN); 47.5HZ±0.05HZ(VDE)	
High Loss Frequency	65HZ±1HZ(UPS,APL,GEN); 51.5HZ±0.05HZ(VDE)	
High Loss Return Frequency         63HZ±1HZ(APL,GEN,UPS);           50.05HZ±0.05HZ(VDE)		

Output Short Circuit Protection	Line mode: Circuit Breaker Battery mode: Electronic Circuits		
Efficiency (Line Mode)	>95%(Rated R load, battery full charged)		
Transfer Time	10ms typical (UPS,VDE) 20ms typical (APL)		
Output power derating:	230Vac model:		
When AC input voltage drops to 95V or 170V depending on models, the output power will be derated.	Output Power  Rated Power  50% Power  90V 170V 280V		

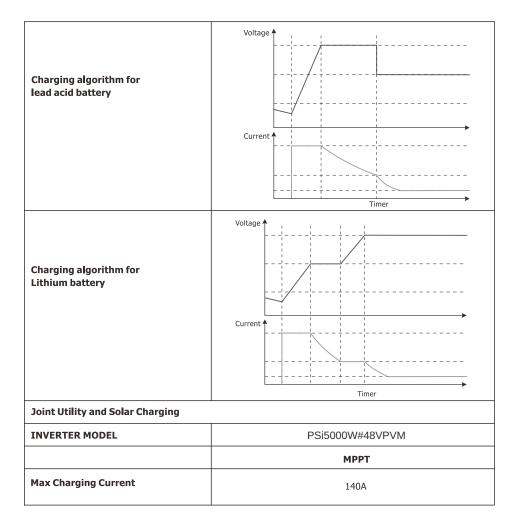

Table 2 Inverter Mode Specifications

INVERTER MODEL	PSi5000W#48VPVM	
Rated Output Power	5000W	
Output Voltage Waveform	Pure Sine Wave	
Output Voltage Regulation	230Vac±5%	
Output Frequency	60Hz or 50Hz	
Peak Efficiency	90%	
Overload Protection	5s@≥150% load; 10s@110%~150% load	
Surge Capacity	2 x rated power for 5 seconds	
Nominal DC Input Voltage	48Vdc	
Cold Start Voltage	46.0Vdc	
Low DC Warning Voltage		
@ load < 20%	44.0Vdc	
@ 20% ≤ load < 50%	42.8Vdc	
@ load ≥ 50%	40.4Vdc	
Low DC Warning Return Voltage		
@ load < 20%	46.0Vdc	
@ 20% ≤ load < 50%	44.8Vdc	
@ load ≥ 50%	42.4Vdc	

Low DC Cut-off Voltage	
@ load < 20%	42.0Vdc
@ 20% ≤ load < 50%	40.8Vdc
@ load ≥ 50%	38.4Vdc
High DC Recovery Voltage	58Vdc
High DC Cut-off Voltage	60Vdc

# Table 3 Charge Mode Specifications

Utility Chargin	ng Mode		
INVERTER MODEL		PSi5000W#48VPVM	
Charging Current @ Nominal Input Voltage		1~60A	
Floating charging	AGM / Gel/LEAD Battery	54.8Vdc	
voltage	Flooded battery	54.8Vdc	
Bulk charging voltage AGM / Gel/LEAD Battery		57.6Vdc	
(C.V voltage)	Flooded battery	56.8Vdc	
Charging Algo	rithm	3-Step(Flooded Battery,AGM/Gel/LEAD Battery),4-Step(LI)	
Solar Charging	g Mode		
INVERTER MODEL PSi5000W#48VPVM		PSi5000W#48VPVM	
Rated Power		5000W	
MPPT charger			
solar charging current		80A	
Max.PV Array (	Open Circuit Voltage	145Vdc max	
PV Array MPP	Γ Voltage Range	60~130Vdc	
Min battery voltage for PV charge 34		34Vdc	
Standby Powe	r Consumption	2W	
PWM charger			
solar charging	current	60A	
Operating Voltage Range		64~72Vdc	
Max.PV Array Open Circuit Voltage 105Vdc		105Vdc	
Min battery voltage for PV charge		34Vdc	
Battery Voltage Accuracy		+/-0.3%	
PV Voltage Ac	curacy	+/-2V	
	rithm	3-Step(Flooded Battery,AGM/Gel/LEAD Battery), 4-Step(LI)	

**Table 4 General Specifications** 

INVERTER MODEL	PSi5000W#48VPVM	
Safety Certification	CE	
Operating Temperature Range	-10°C to 50°C	
Storage temperature	-15°C~ 60°C	
Dimension (D*W*H), mm	468 x 330 x 119	
Net Weight, kg	10.0	

# TROUBLE SHOOTING

Problem	LCD/LED/Buzzer	Explanation / Possible cause	What to do
Unit shuts down automatically during startup process.	LCD/LEDs and buzzer will be active for 3 seconds and then complete off.	The battery voltage is too low ( < 1.91V/Cell)	Re-charge battery.     Replace battery.
No response after power on.	No indication.	The battery voltage is far too low. (<1.4V/Cell)     Battery polarity is connected reversed. Input protector is tripped	<ol> <li>Check if batteries the wiring are connected and well.</li> <li>Re-charge battery.</li> <li>Replace battery.</li> </ol>
Mains exist but the unit works in battery mode.	Input voltage is displayed as 0 on the LCD and green LED is flashing.	Input protector is tripped	Check if AC breaker is tripped and AC wiring is connected well.
	Green LED is flashing.	Insufficient quality of AC power (Shore or Generator)	<ol> <li>Check if AC wires are too thin and/or too long.</li> <li>Check if generator (if applied) is working well or if input voltage range setting is correct.(Appliance=&gt;wide)</li> </ol>
When the unit is turned on, internal relay is switched on and off repeatedly.	LCD display and LEDs are flashing	Battery is disconnected.	Check if battery wires are connected well.
Buzzer beeps continuously and	Fault code 07	Overload error. The inverter is overload 110% and time is up.	Reduce the connected load by switching off some equipment.
red LED is on.	Fault code 05	Output short circuited.	Check if wiring is connected well and remove abnormal load.
	Fault code 02	Internal temperature of inverter component is over 90°C.	Check whether the air flow of the unit is blocked or whether the ambient temperature is too high.
	Fault code 03	Battery is over-charged.  The battery voltage is too high.	Return to repair center. Check if spec and quantity of batteries are meet requirements.
	Fault code 01	Fan fault	Fan fault
	Fault code 06/58	Output abnormal (Inverter voltage below than 202Vac or is higher than 253Vac)	Reduce the connected load.     Return to repair center
	Fault code 08/09/53/57	Internal components filed.	Return to repair cente
	Fault code 51	Over current or surge	Restart the unit, if the error
	Fault code 52	Bus voltage is too low	happens again, please return
	Fault code 55	Output voltage is unbalanced	to repair center.
	Fault code 56	Battery is not connected well or fuse is burnt.	If the battery is connected well, please return to repair center.

**Appendix: Approximate Back-up Time Table** 

Model	Load(W)	Backup Time@48Vdc 100Ah(min)	Backup Time@48Vdc 200Ah(min)
	500	613	1288
	1000	268	613
	1500	158	402
	2000	111	271
	2500	90	215
5KW	3000	76	182
	3500	65	141
	4000	50	112
4500	44	100	
	5000	40	90

**Note:** Backup time depends on the quality of the battery, age of battery and type of battery. Specifications of batteries may vary depending on different manufacturers.
